

Testimonial for HF 9

Committee members

I am submitting this testimonial against passing of HF9.

1. Nuclear power: Nuclear power plants do possess the danger to public health due to extreme weather. Extreme weather may cause major flooding or loss of even back-up power to keep the plants running. Given the fact that extreme weather is now becoming normal and probability of potential disaster is much higher.
2. Delay in clean energy goals: Climate change is happening rapidly and any enabling of delay in clean energy goals is not acceptable for our future generations. Keeping the time-line of goals will ensure that implementation of cost effective clean energy solutions will accelerate.
