Date March 2, 2020

Summary

Modifies the State Building Code to require installing adult-sized diaper changing stations in buildings with restrooms that are accessible to the public. Requires, on each floor where there is a public restroom, the installation of at least one changing station, either in a unisex restroom or in both a men's restroom and a women's restroom. Defines the components of a changing station and specifies the size, height, and weight capacity of an appropriate table.

This change would apply only to new construction or substantially remodeled bathrooms.
