## Summary

This bill would allow Minnesota cities to prohibit the use of pollinator-lethal insecticides, as defined in the bill, within their borders. However, cities could not prohibit certain pet care, personal care, and indoor pest control products; pesticide-treated wood products; or certain pesticides used by the Metropolitan Mosquito Control District to protect public health. The Minnesota Department of Agriculture would be required to maintain a list of pollinator-lethal insecticides on the agency's website.

State law currently preempts, or prevents, most local pesticide control ordinances (Minn. Stat. § 18B.02). However, a specific exception allows cities to require licensed applicators to post warning signs after applying pesticide to a yard, park, or other turf-grass area (Minn. Stat. § 18B.09). H.F. 718 would retain cities' ability to require warning signs and provide new authority to prohibit pollinator-lethal insecticides.
